Water Dispense System

**BRING AN ADDED
DIMENSION TO YOUR
BEVERAGE VENDING SERVICE**

WITH

BRITA

Introducing the

Azure Water Dispense System

Helping you concentrate on running your business

The new generation Azure puts you in total control of your on-site chilled beverage vending and staff refreshment. It removes the hassle of bulk water deliveries and storage, avoids the health and safety issues with lifting heavy bottles and eliminates any worries about mains water quality thanks to an integral UV and Brita Water Purification System. Your staff and customers will love the machine too thanks to a fully illuminated Brita fascia and stunningly cool blue LED lighting in the cup dispense area.

However the Azure is much more than just a high-specification, high capacity water dispenser. A choice of three models now mean you can also provide sparkling water, flavour-hinted waters and a delicious range of real fruit drink concentrates. If you're looking to encourage healthier lifestyle and provide total customer confidence in your chilled refreshment service, our Del Monte Fruit Drink Dispenser could be just for you. In addition to Brita filtered water, choose from real fruit drinks including Orange, Apple & Raspberry or Apple & Mango.

The Azure's 'green' credentials also impress. Environmentally-friendly flash cooling technology means that power is only consumed when chilled water selections are actually requested. The same 'green' design philosophy has been extended to the main graphic display with long-life LED lighting which further reduces power consumption and removes the need for neon gas filled tubes. Kinder on your pocket and kinder on the environment too.

Optional payment module shown

The perfect partner for your hot beverage machine!

'Go Large' with 12oz clear cups

Standard Features >>>>
